

Putting Identity at the heart of your SOA

Vordel and Entrust working together to protect access throughout your SOA Infrastructure

Overview

Entrust GetAccess is a high performance, scalable Web access control solution. The combination of Entrust GetAccess with the Vordel Gateway provides enterprises with a standards-based solution for securing both website and Web Service access. The joint solution provides content filtering and identity-based management and security for data exchanged with Web Services in a Services Oriented Architecture.

Let the only Good Guys in, with the Correct Data

The combined solution ensures only the intended consumers of particular services are permitted access. Furthermore, it filters against malicious data that could potentially undermine the availability or functions of these services is submitted.

A powerful policy management console enables administrators to centrally manage the distributed enforcement of security and non-security related policies across all services. There is no necessity to replicate policies or user information between the Vordel or Entrust product components.

Broad support and used of all major security standards ensures that customers avoid the use of tightly-coupled APIs.

How it all Works

Vordel integrates directly with Entrust GetAccess to perform authentication checks on incoming and outgoing XML, HTTP traffic (list all traffic types!!), based on the requirements of pre-configured security policies. The authentication checks are complemented by a sequence of authorization, content filtering, transformation and routing operations performed on the data by Vordel.

Why Choose Vordel and Entrust

Vordel and Entrust have a number of mutual customers where the joint solution is deployed, delivering a range of benefits, including:

- **Securely Extend Business Processes across the firewall**
Secure the extension of business processes across the firewall, based on XML and Web Services integration technologies and conduct transactions 24x7 over open networks with customers, partners and suppliers – with confidence.
- **Safeguard against increased risk, without increasing development and integration costs**
No need for costly development or integration work ensures the competitive gains from the speed and flexibility of rolling out Web Services-based solutions to trading partners are not compromised by inadequate security.
- **Long-term flexibility**
The avoidance of proprietary technologies ensures users have flexibility when selecting future security technologies.
- **Leverage investment in access management**
Enterprises can leverage any existing investments they may have made in Entrust GetAccess by extending its functionality to their SOA-based integration activities.

Note: Vordel Gateway also supports digital certificates issued from the Entrust PKI certificate authority and supports the Entrust Secure Transaction Platform.
